SlickEdit Standard is the industry-standard program editor. Using it, developers easily create and navigate through complex source code projects containing multiple source files and language types. Side-by-side file comparison is a big time-saver as you can see easily what has changed in the latest version of your files in a split second. Windows Edit: (recommended!) With SlickEdit Standard, the programmers in your team can effortlessly edit one project, one file at a time. Open or create the project file (such as.cproj) in a text editor. All of the editing functions are accessible from the File menu. Key functions are also located on the context-sensitive shortcut menu. As you edit your project file, SlickEdit Standard will monitor key editing functions via monitoring shortcuts. The macros we are familiar with from our other editors are also available. The function number you type is highlighted to indicate its compatibility. You also have access to the drop-down list from which you can choose the language to use when performing macros. Even the most trivial functions are supported. And when you edit another project file with SlickEdit Standard, it will seamlessly recognize the project file type and its contents. To navigate within a project file, use the Project view or the File view. In addition to the core editing functions, additional features are available to professional developers. You can manage your files via version control, add files to your list of files to ignore, and add custom text or color codes in files.
